BIEN
THE ULTIMATE F1 ARCHIVE

KEY DISCUSSION POINTS
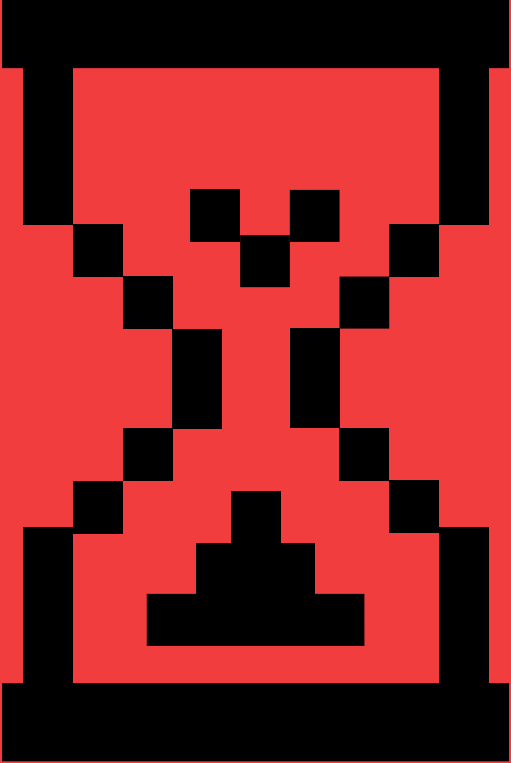

Bien is the online archive of all Formula-1 races gathered in one place. Since the history of Formula-1 dates back to times way before web applications were even heard of, it is essential to digitilize the existing data in order to keep track of the history and help people learn about this beautiful and legendary sport.

Bien can be thought of as a digitilized library, an archive of the legendary Formula-1 races. From searching throughout the history of all the races and getting detailed information about the drivers, to seeing each individual pitstop duration of any race and the laptimes of anyone, Bien is the ultimate helper in diving deep into the world of Formula-1.

You can look through the drivers' qualifications, their standings in each race, status in the races they participated and their technical information such as their code names and wikipedia pages.

Bien also allows you to search through the circuits where the races were held and visit their wikipedia pages, get a detailed information about any race and their results.
